

SmartScan ESD/EMC Susceptibility Testers

**Technology to pin-point circuits sensitive to ESD and other EMC
Transient events!**

- Identify and map sensitive circuits

- Identify devices sensitive to ESD and EMC

SmartScan the only commercially available system *specifically* designed for ESD/EMC susceptibility scanning and is available in four configurations:

- SmartScan **BASIC** – A manual system providing basic scanning capabilities
- SmartScan **AUTOSCAN** – A bench-top automated robotic tester including software analysis
- SmartScan **PROFESSIONAL** – The ultimate automated system with the most sophisticated analysis software
- SmartScan **AUTOSCAN EMI** – An automated EMI test system (emissions) for devices, boards and systems

AUTOSCAN and **PROFESSIONAL** models include the ability to add scanning using sine waves, ESD direct injection, or EFT (Electrically Fast Transients).

PROFESSIONAL models also include **Resonance Scanning** to identify resonance circuits likely to cause problems during system level immunity and emissions testing.
