

When using the HX series helical antennas in an unpressurized environment at altitude it is highly recommended the pressure relief port be opened by removing the 5/16-18 nylon bolt from the end of the antenna. To return the antenna to normal sealed operation (recommended), the pressure relief port must be again sealed with the provided 5/16-18 x 1/2" nylon bolt and O-ring with a torque of less than 32 In. Lbs.

Remove for unpressurized operation,
using a 1/2" wrench.
When replacing DO NOT OVERTIGHTEN

Replace for terrestrial operation.
